# Water Salinity Sensor User Guide

Front　　　Back

The top row signifies the safety level of the water for drinking
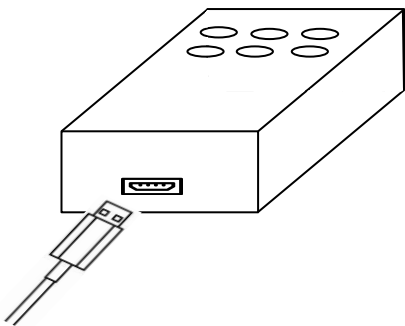

The bottom row signifies the safety level of the water for crops
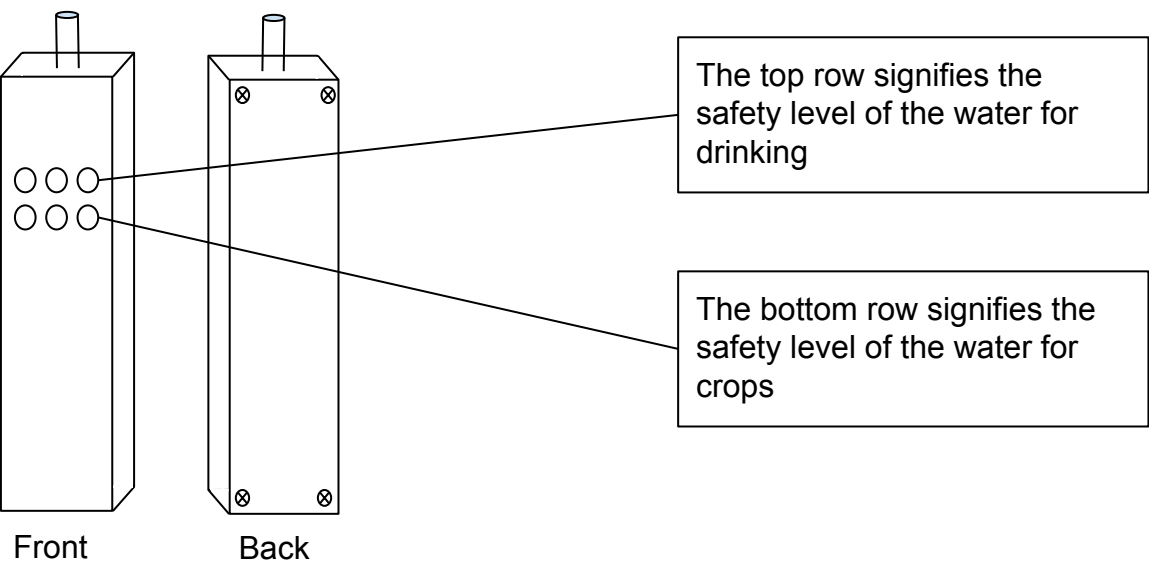

**1** Plug the micro usb into the device, and connect the USB on the other end into a power source

**2** Dip the probe in the water for at least 5 seconds

**3** If the light turns red, the water is not safe to drink/not suitable for crops

**4** If the light turns yellow, the water is not recommended for human consumption or for crops
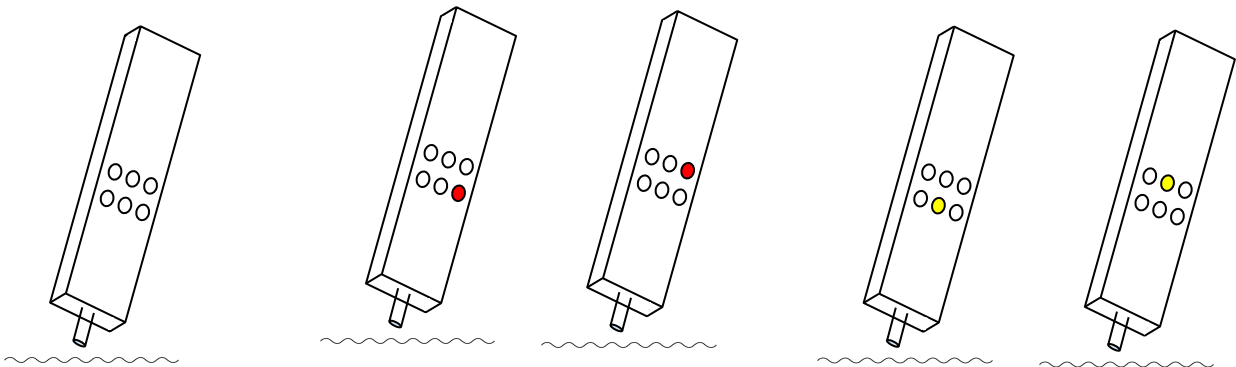

**5** If the light turns green, the water is safe to drink and safe for crops
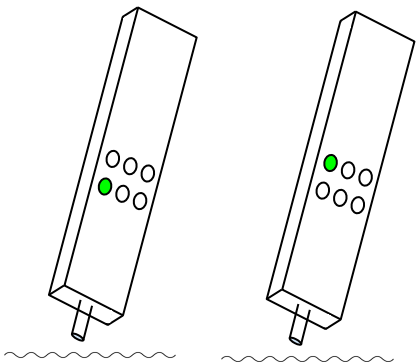

## Caution

**Keep away from mouth and any exposed areas of the body. Handle with caution and care, do not shake or attempt to break the device, as fluids may be exposed to electrical components.**
